Date: 16 October 2009

To whom it may concern:

RA Tech Electrical Services INC was recommended to us by Mr. J. D. Hundt (Jim), Director Production Engineering, Canada, CROWN Metal Packaging Canada LP, Rick and his team recently disconnected and match mark a complete can line in Bolton Ontario Canada that was de-commissioned and transported to our facility in Barbados. Rick then traveled 4 times to our facility to assist in the electrical line control installation and set up work on our 208 x 208 aluminum VSC production line at our CROWN Packaging Barbados facility

This work consisted principally of the various system installations, writing the logic programs for four Allen Bradley Programmable Logic Controllers, integration of third party equipment into our system, procurement of the logic software and other components required to complete the tasks, preparation of programming manuals and the training of our personnel.

We were very impressed with the professional manner in which Mr. Arthur and his team carried out the afore described tasks, his knowledge and understanding of the mechanical operating sequence of our production line and his ability write the programming logic sequences required to assure an efficient flow of product through our production line.

We plan to continue our association with RA Tech Electrical Services INC as we will employ their services on another similar project at our CROWN Packaging Jamaica plant in the very near future.

Regards,

James C. (Jim) Huff  
Technical Director  
CROWN Packaging Caribbean
